

Your Seth Radio Mounting Bracket comes with a hardware packet:

5 Pan Head Black Oxide 18-88 SS #10-32 x 5/8" Screws

9 #10 Flat Washers SS #30

9 #10-32 Nylon Lock Nuts

Install Instructions for Seth Radio Brackets HD-EG-M016 & HD-EG-H016:

1. Remove the fairing and front cover from your motorcycle to give you easy access to the dash.

2. Align the radio bracket onto the dash with the air vents and switch notch. CAREFULLY clamp firmly in place to the dash - this bracket is designed to flex a bit - clamping will give you the best fit before drilling and cutting into the dash. Drill four pilot holes using 3/16" drill bit into the dash. Use a Sharpie and trace the upper right notch (wire trough) onto your dash. Remove your Seth Radio Bracket.

3. Using a fine blade (or better yet, a Dremel like tool), carefully notch the dash to match the Seth Radio Bracket notch (upper right in the above photo). This notch will accommodate your radio wires. See photo below.

4. Now, replace your Seth Radio Bracket onto the dash and secure it to the dash using the Seth Radio Mounting Bracket hardware provided: 4 black oxide screws through the face of the radio bracket and the dash; and secure with flat washers and lock nuts behind the dash. **DO NOT OVER TIGHTEN** - you do not want to crack your dash!!!

3. Remove the orange "DO NOT OVER TIGHTEN" warning label. Install the Motorola/Harris bracket provided with the manufacturer's radio kit using flat washers and locks nuts from your Seth Radio Bracket hardware package.
4. Complete mounting your Motorola/Harris radio in accordance with manufacturer's instructions using manufacturer's hardware.
